

Humor.io

We gave robots eyes, ears, and a
bit of common sense

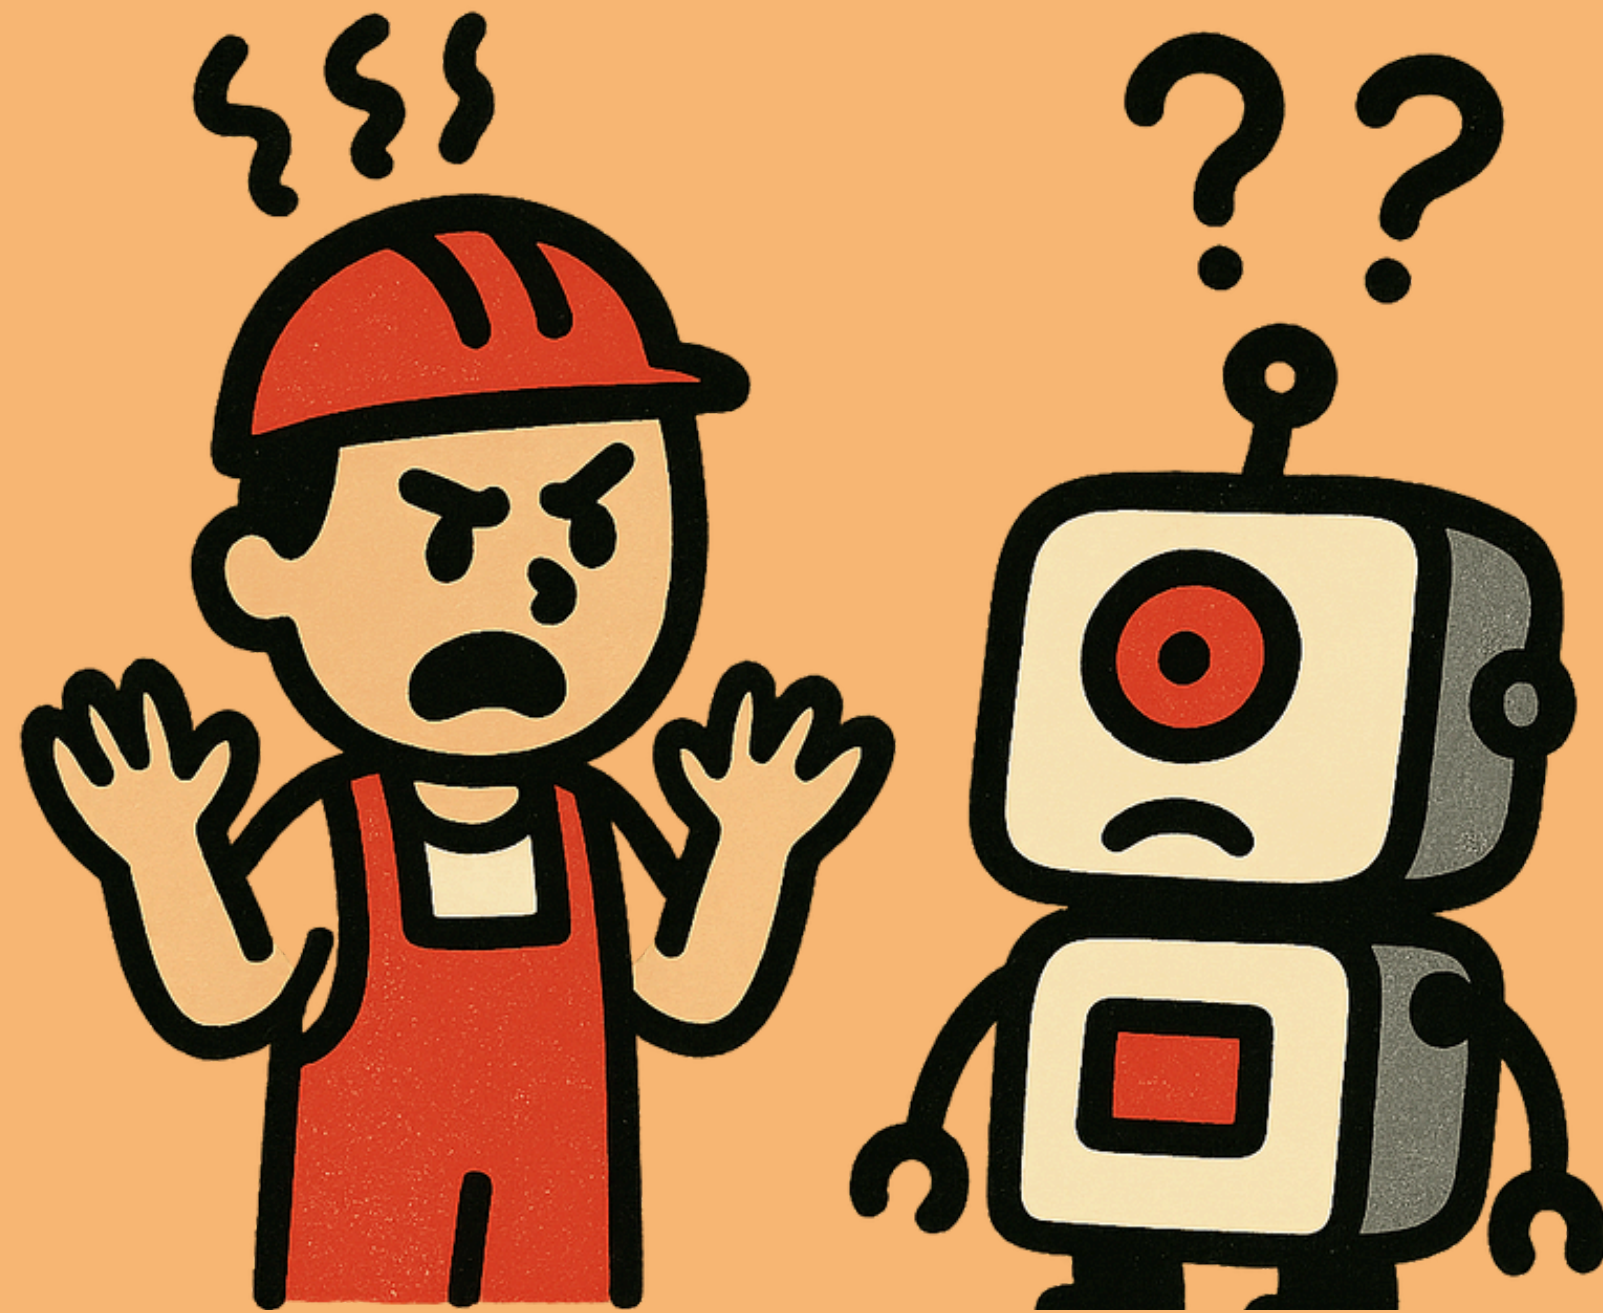

Challenge 3

“Human interaction interface for mobile robots in a manufacturing environment”

Problems

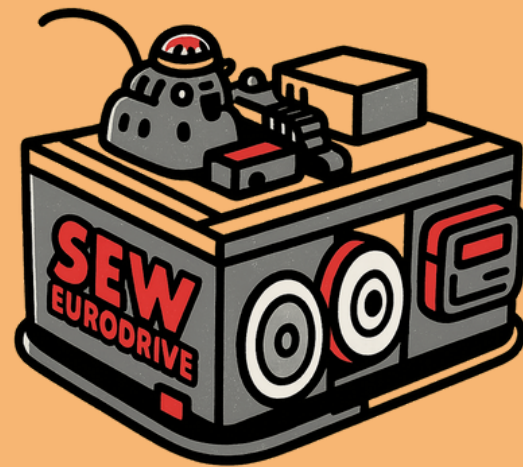

Our Concept

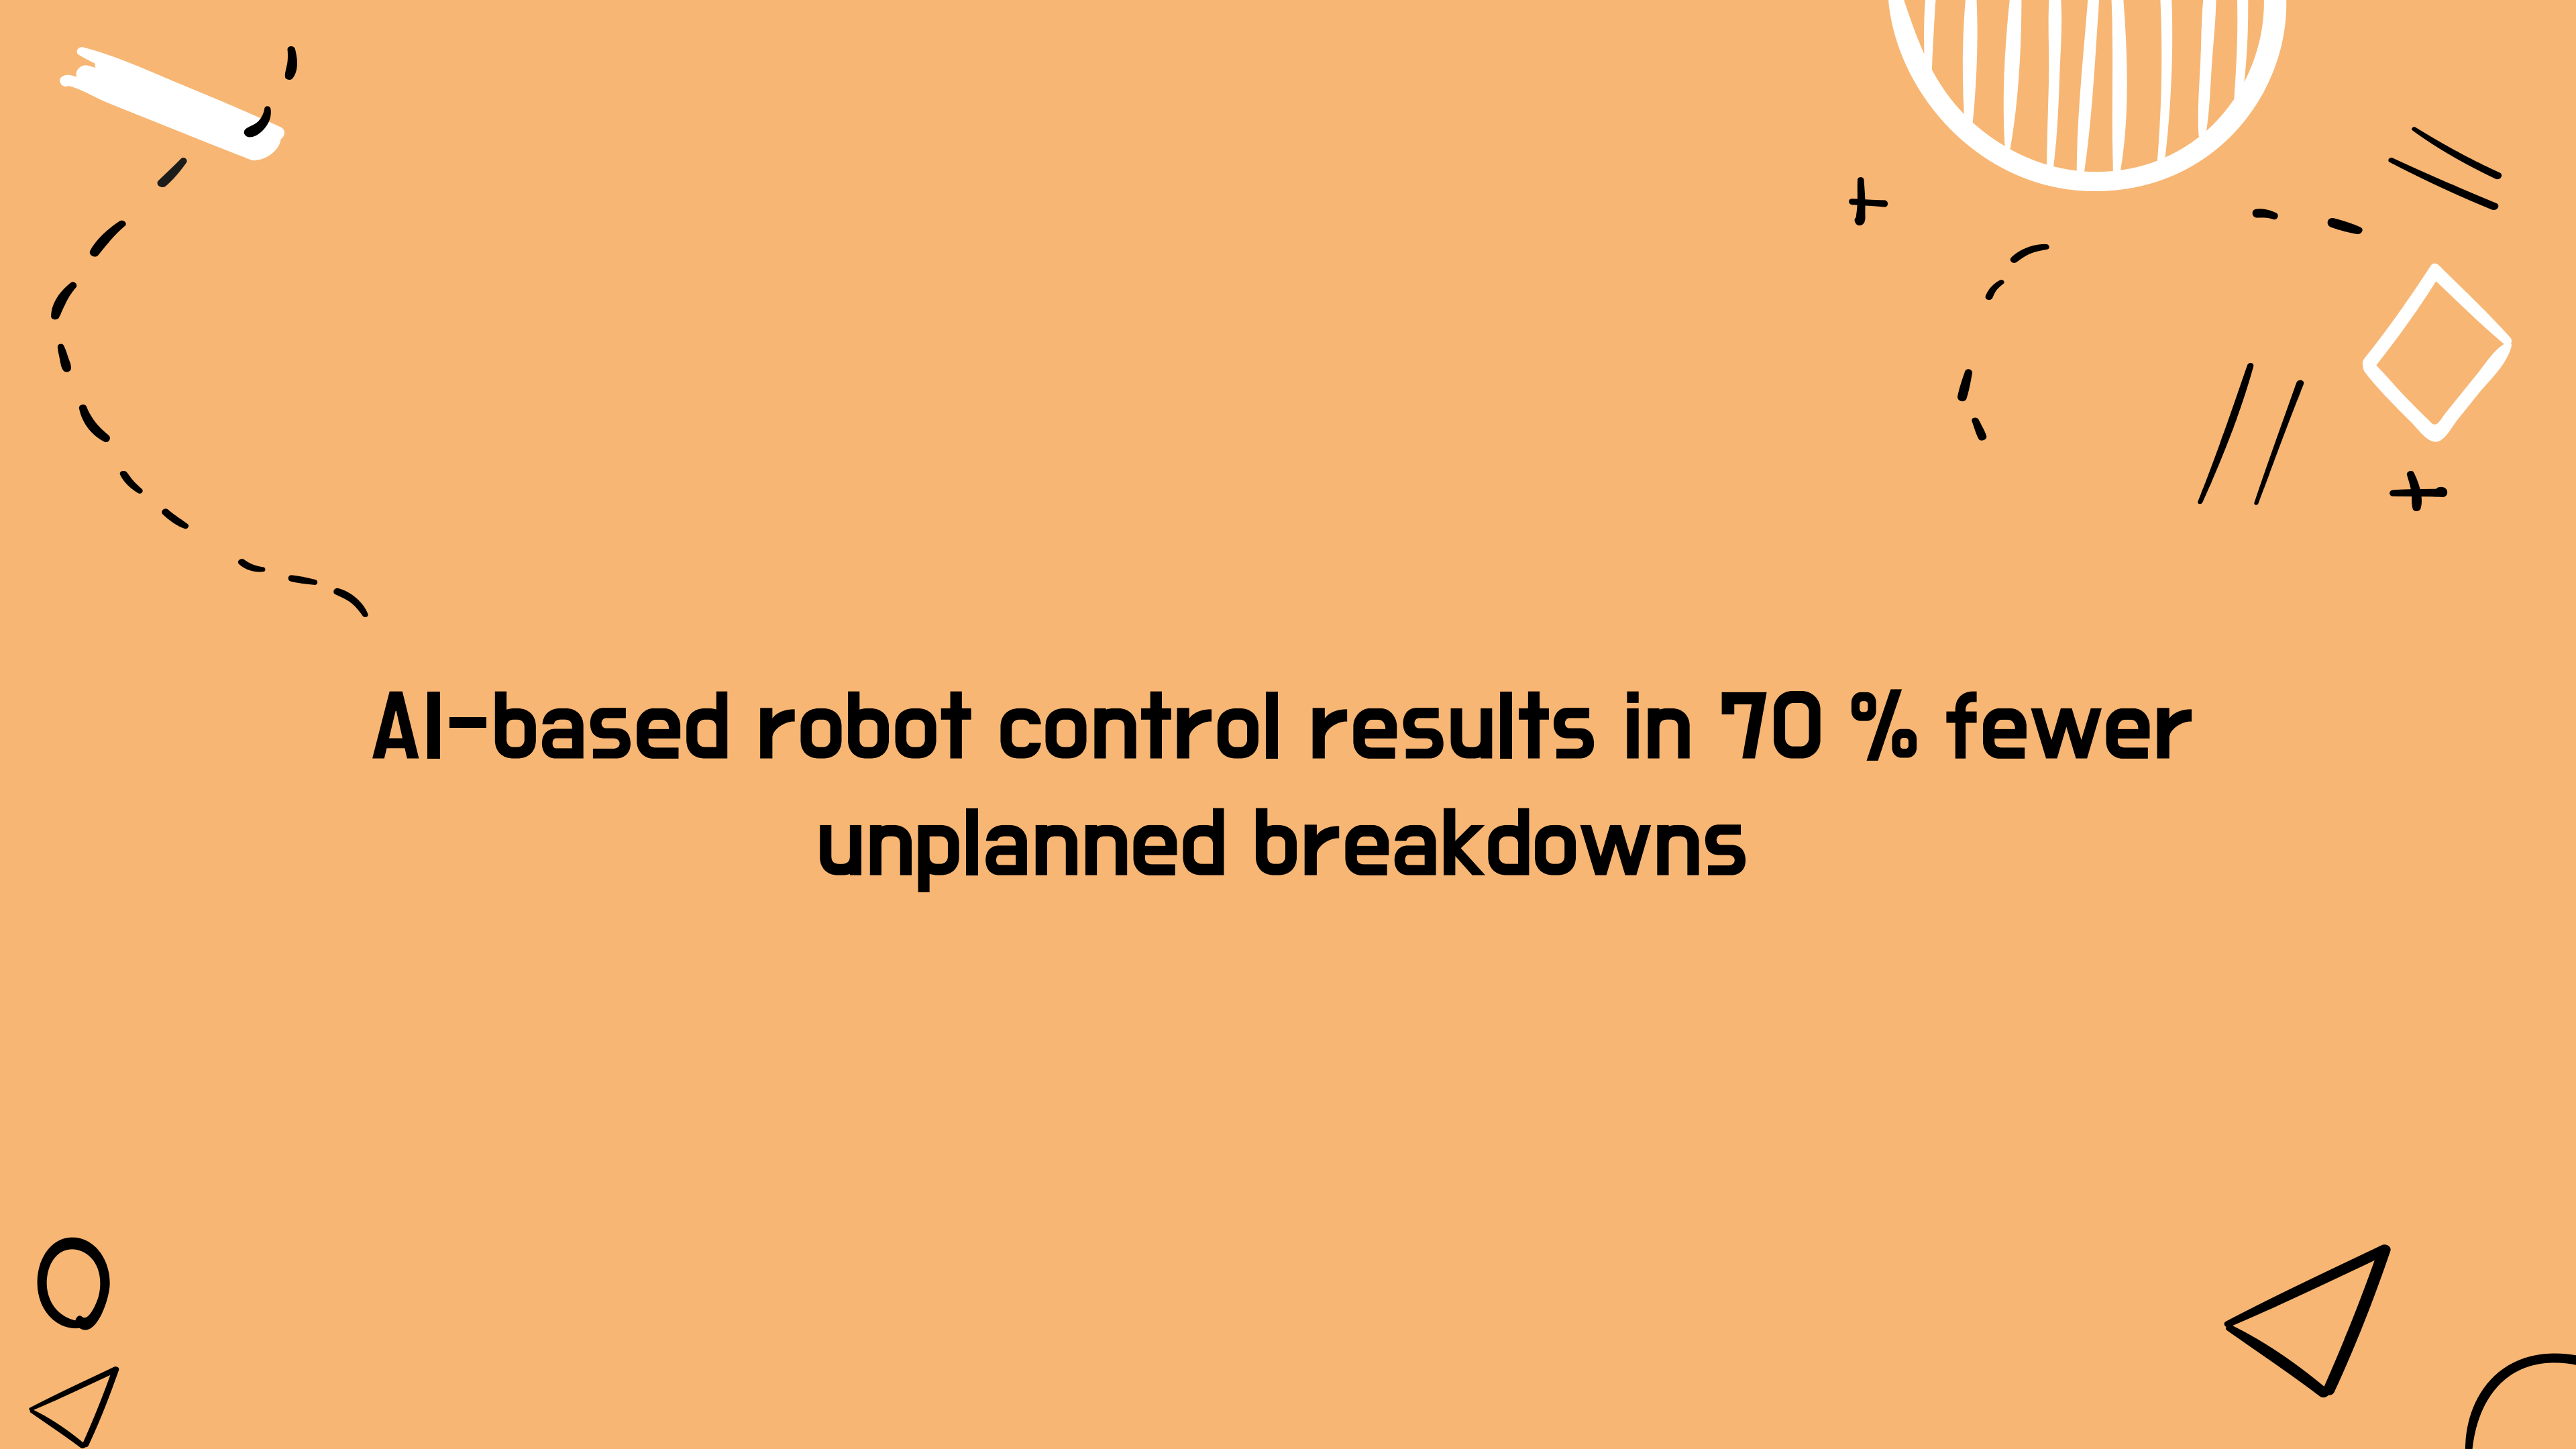

Natural Input

- Voice
- Hand Gesture
- UI

Robot Response

- Voice
- Status/Symbol on Screen
- Complete Tasks Accordingly

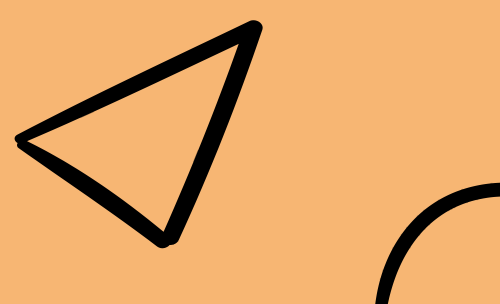

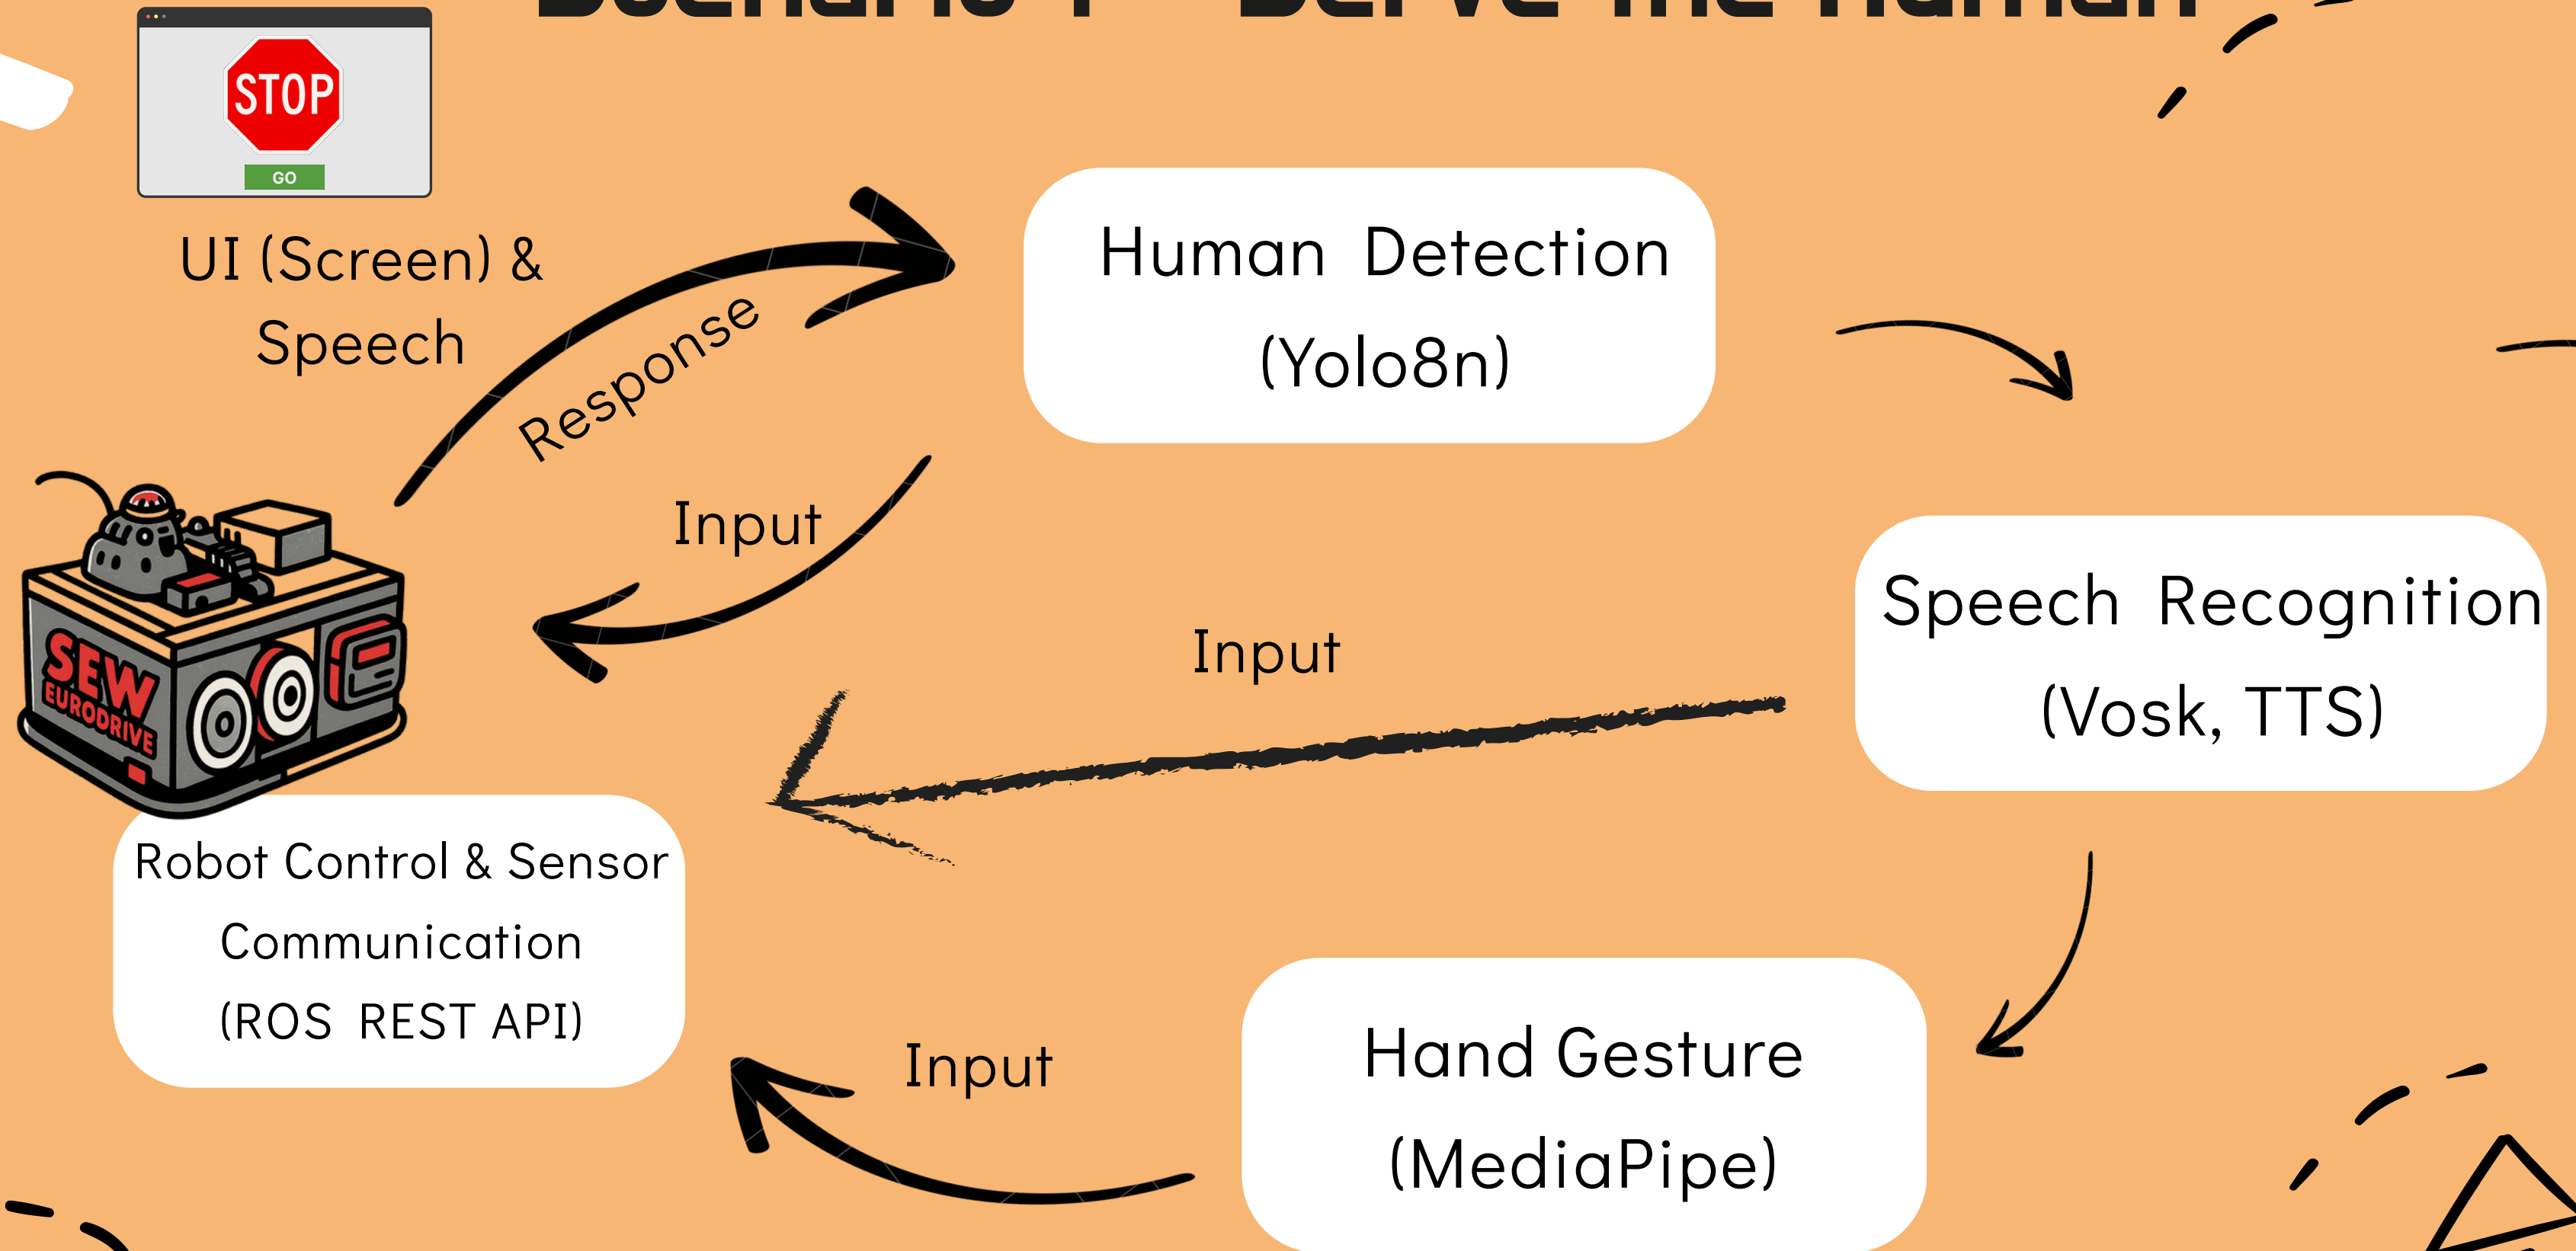

**AI-based robot control results in 70 % fewer
unplanned breakdowns**

**"Let's show you the future of human-
robot interaction."**

Scenario 1 - Serve the Human

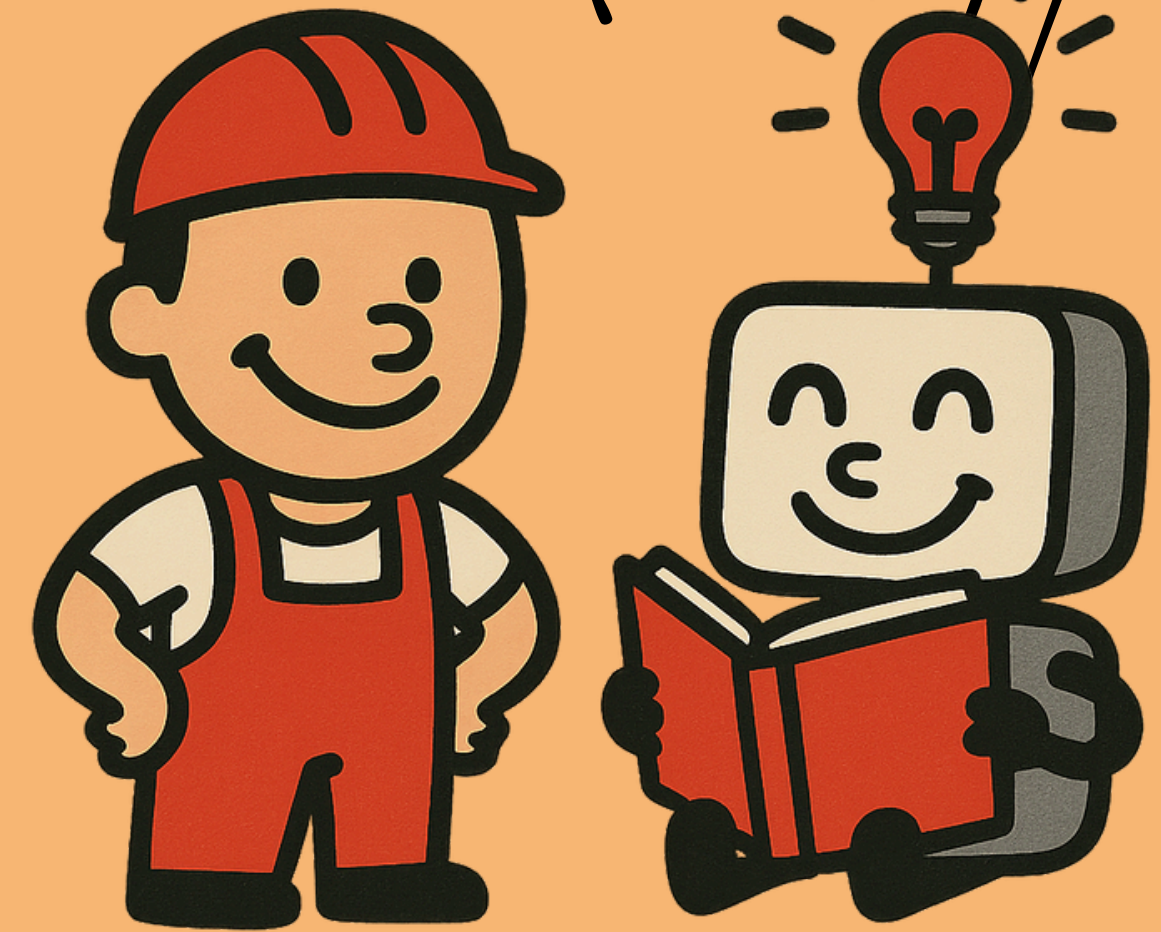

Scenario 2 - Interaction in warehouse...

Demo

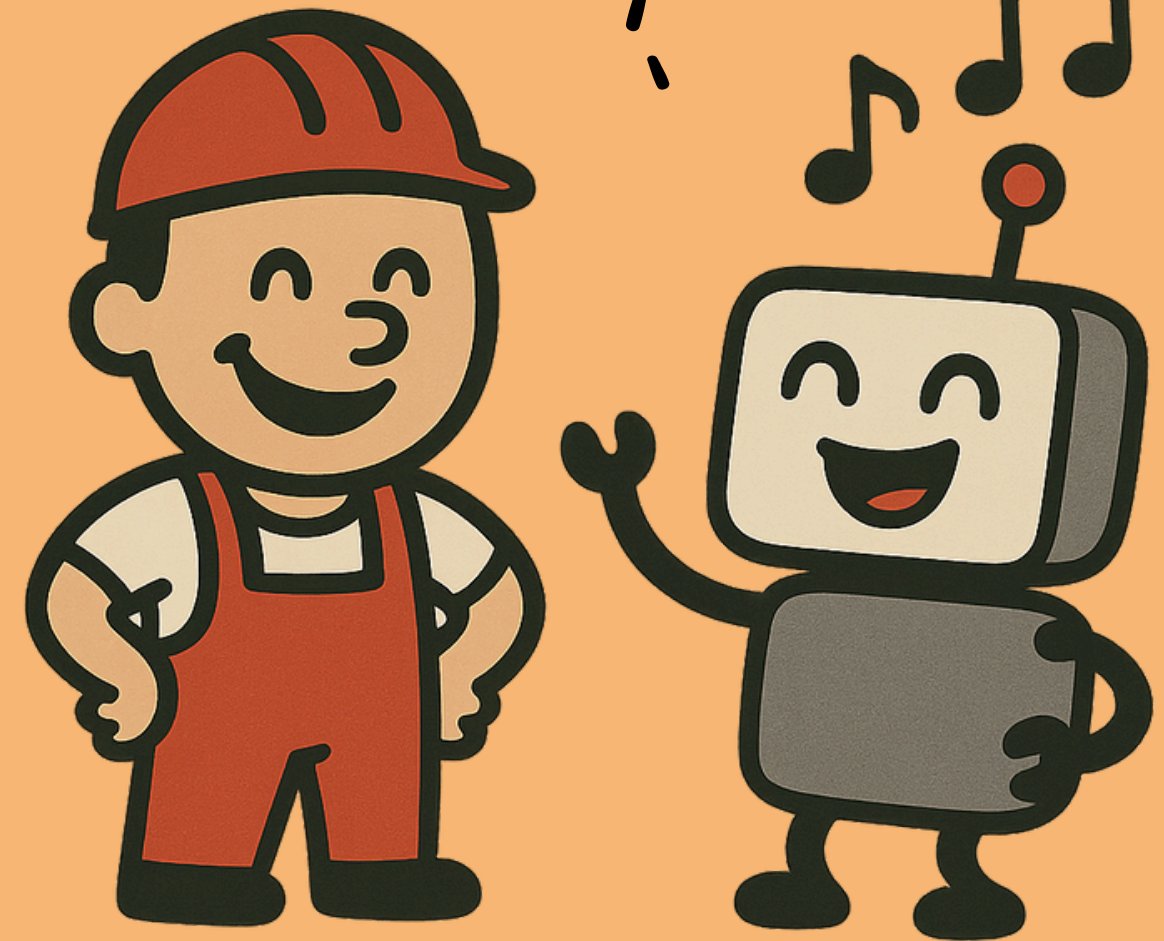

Future Development

- Self-learning
- 3D Recognition
- Natural Communication
- Transition to Multiple Scenarios
- Simultaneous Multi-model Interaction

Future UX and UI

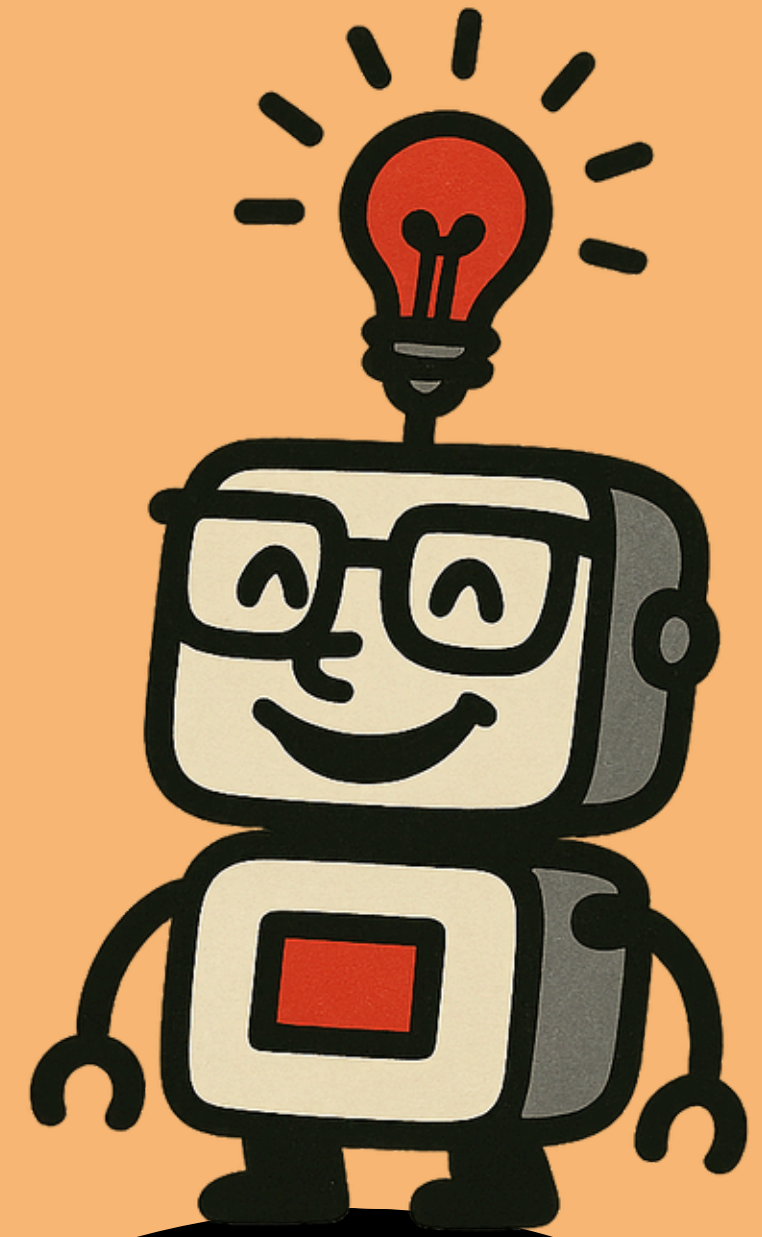

- Integrate an On-Screen Avatar
- Add Facial Expressions
- Enable Natural-Sounding Voice Output
- Train the Robot to Detect and Avoid Workers

Natural

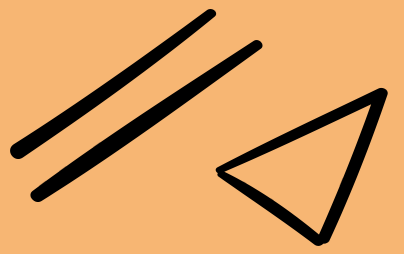

Intelligent

Interactive

+
